DETAILED ACTION

Claims 1-33 are pending in the instant application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31, drawn to a method of screening agents, classified in class 435, subclass 6.
- II. Claim 32, drawn to a vegetative cell, classified in class 435, subclass 325.
- III. Claim 33, drawn to a method of making a compound useful in the prevention or treatment of cancer, classified in class 435, subclass 71.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group II and Inventions of Group I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of Group II can be used in materially different processes of using the product as evidenced by the distinct inventions of Groups I and III.

Inventions of Groups I and III are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of Groups I and III comprise steps which are not required for or present in the methods of the other groups such as: (1) the step of assessing the function of the test agent in Group I; and (2) the step making a

Art Unit: 1636

compound for the treatment or prevention of cancer in Group II. Thus, the operation, function and effects of these different methods are different and distinct from each other. Moreover, the end results of each of these methods differ. Therefore, the inventions of these different, distinct groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. The search required for each of the above groups is not required for any one of the others. Thus, restriction for examination purposes is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
